I think we can release Docs 2-5 with the target sheet if you want. Doc 1 has license plate numbers that need to be redacted. Let me know if you have any other thoughts or concerns.

Can you send me a couple of those docs electronically. I want to look at them again and think about it.

Subject: Confidential Markings on Documents

Hi Larry.

Per your request, this email summarizes our conversation about the documents CID collected from an abandoned facility, some of which contain "confidential" notations. I agree with you all that any PII in the documents should be redacted if those records are to be made publicly available.

Additionally, if you all have confirmed that there is no longer any business entity having a confidentiality interest in the documents, then you are not required to maintain those docs as CBI, particularly since no business entity has expressly made a CBI claim. A confidential notation does not, in and of itself, necessarily equate with a CBI claim. However, I would suggest that you all either note on the docs themselves, or through use of something like a target sheet, indicate clearly that the docs do not contain any CBI.

Caveat—You all need to be certain that there isn't any third-party business information in the docs which such third-party might claim as CBI if they knew that EPA proposed to release the info to the public.

Let me know if you have any further questions.
